

PUMP REMANUFACTURING PROGRAM

The Ampco Pumps Company remanufacturing program has earned an excellent reputation since it was introduced in 2010. Remanufacturing a used pump is a significantly lower-cost alternative to purchasing a new replacement pump. This program will restore your Waukesha Universal I and II Series style pumps (from 006 to the 320) to their original performance and efficiency. Ampco pumps offer complete interchangeability, superior quality, and reliability. All completely remanufactured pumps are performance tested and include a full one year factory warranty.

ADVANTAGES OF AMPCO'S REMANUFACTURING PROGRAM

- Reconditioning up to four times, depending on wear
- Centrally located for faster turn-around and reduced shipping costs
- All assembled pumps are performance tested
- Helical Gears
- Two week turnaround
- Shafts up-graded to 17.4 ph
- Stainless steel bearing retainers
- Powder coated finish on gear case
- Options available to improve pump wear

PD PUMP REMANUFACTURING

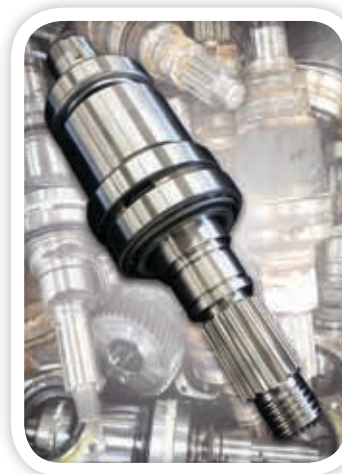

PD PUMP REMANUFACTURING PROCESS

COMPLETE REMANUFACTURING

- Machine housing and cover to accommodate oversized rotors (up to 4 times)
- Recondition gear case including powder coating finish
- Replace all other parts including rotors, shafts, bearings, bearing retainers, gears, jam nuts / rotor nuts, seals and elastomers
- Performance test before shipment
- One-year factory warranty
- Average savings of 30% over new pump pricing
- Possible adders: We will notify you if the housing, cover, gear case or ferrules are not salvageable or if the pump requires excessive clean up
